Cadena Bitcoin

Peer-to-peer decentralized finance
www.cadenabitcoin.com

Use cases

- “Mini Saylor” — Corporate Bitcoin Strategy
- “Dividend Debbie” — Stable Bitcoin Yield
- “Borrowing for the Boat” — Liquidity Without Selling
- “Yield Arber” — Advanced Bitcoin Strategies

Signer App

The Signer is a mobile companion app that generates and protects your cryptographic keys on-device. It authorizes Cadena actions by producing signatures when you approve them. Keys are never uploaded or shared with Cadena.

- Generates a seed and derives your XPUB and public keys.
- Signs requests for lending/borrowing flows using Discreet Log Contracts (DLCs).
- Pairs to your web account via QR so actions on the site can request signatures from your phone.

About the Company

Kevin Bell

President - CFA

Kevin Bell, CFA — tradfi graduate, capital markets veteran, debt and currency dealer, and numbers ninja. Passionate about building efficient financial solutions that promote Bitcoin, freedom, decentralization, and individual empowerment.

Sziller

Chief Technology Officer

Sziller, an Engineer and M.Sc. Architect with decentralization and self-sufficiency on my mind. I'm interested in Engineering solutions for real-life problems accessible to anyone, with skunkswork philosophy. I strive to achieve optimal redundancy by cutting out as many middle-men as possible. I love solutions that work, even if rough on the edges.

Onboarding

How to get started borrowing and lending with Cadena Bitcoin

1

Register your email using the website or app.

2

Click the confirmation link sent to your email inbox.

3

Login to the website on your computer and scan the QR code displayed using the *Signer App.*

4

Go to the website and put in an order to borrow or lend Bitcoin. Complete the transaction by signing the DLC using the *Signer App.*

Registered Bitcoin Service Provider

Cadena Bitcoin is operated by Cadena Bitcoin S.A. de C.V., an El Salvador–licensed Bitcoin service provider. Address: Calle Llama del Bosque Poniente, Urbanización Madre Selva III, Edificio Avante, Local 3-13, Antiguo Cuscatlán, La Libertad, El Salvador.

Advantages of Cadena Bitcoin

For Borrowers

- Access loans using your Bitcoin as collateral.
- No liquidations or margin calls.
- Retain custody of your assets throughout the process.
- No KYC.

For Lenders

- Earn yield backed by Bitcoin collateral.
- Keep your Bitcoin - no need to sell and trigger taxable events.
- Transparent, peer-to-peer transactions.
- Secured by Bitcoins robust infrastructure.

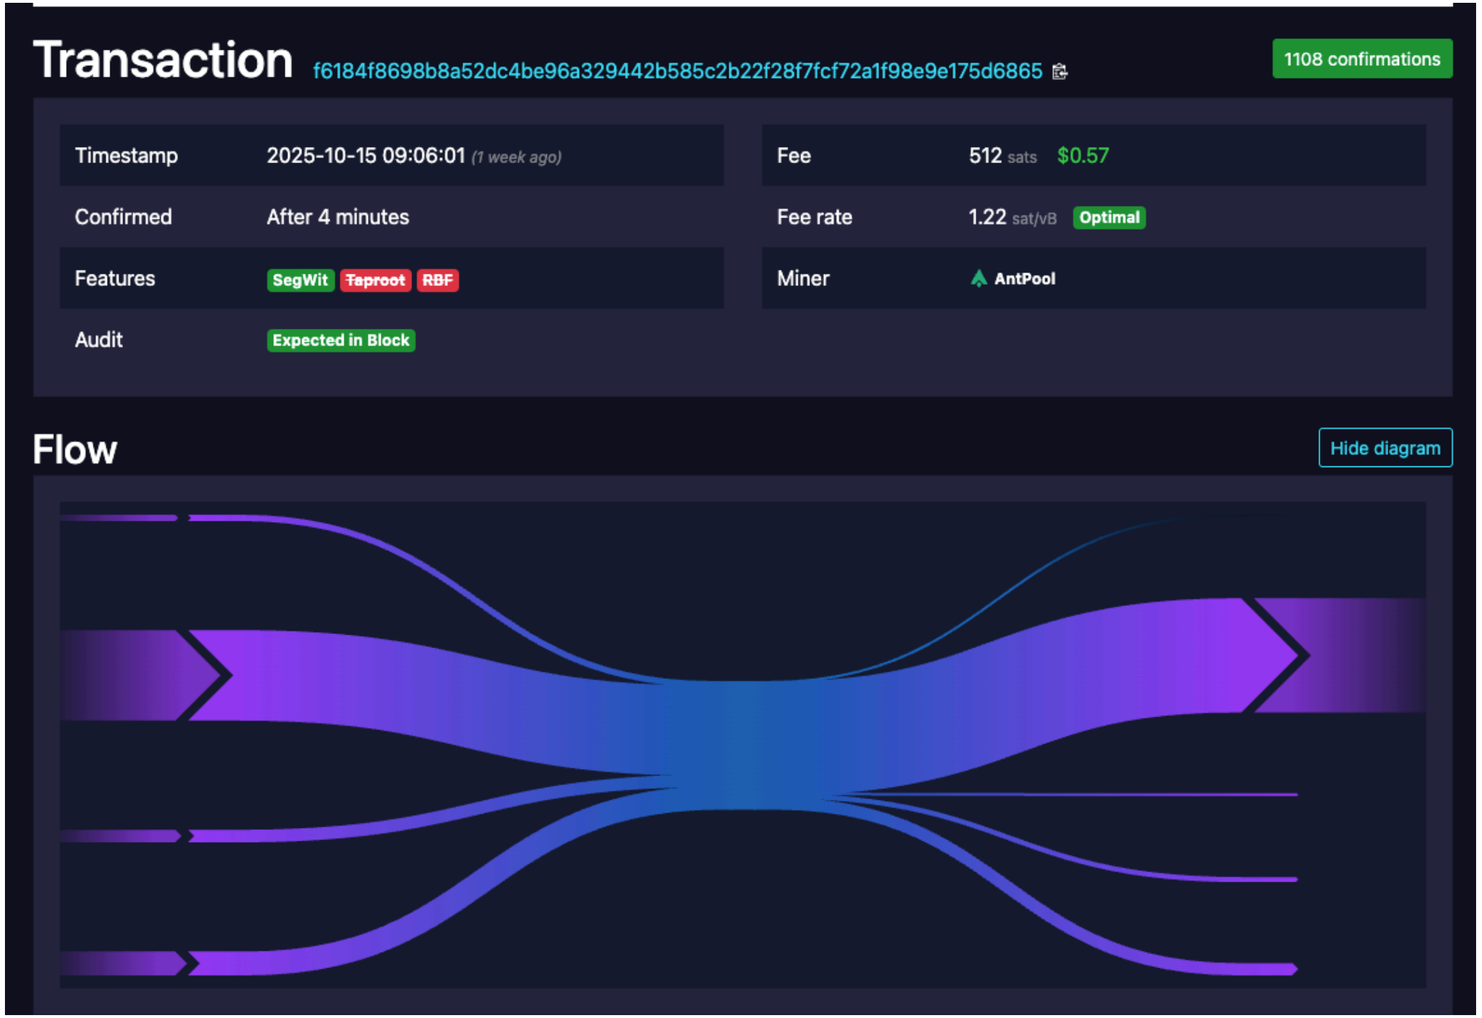

How it Works - Funding Transaction

Input:

- UTXO’s from borrower and lender

Output:

- Change to borrower and lender
- Collateral pool
- Fee

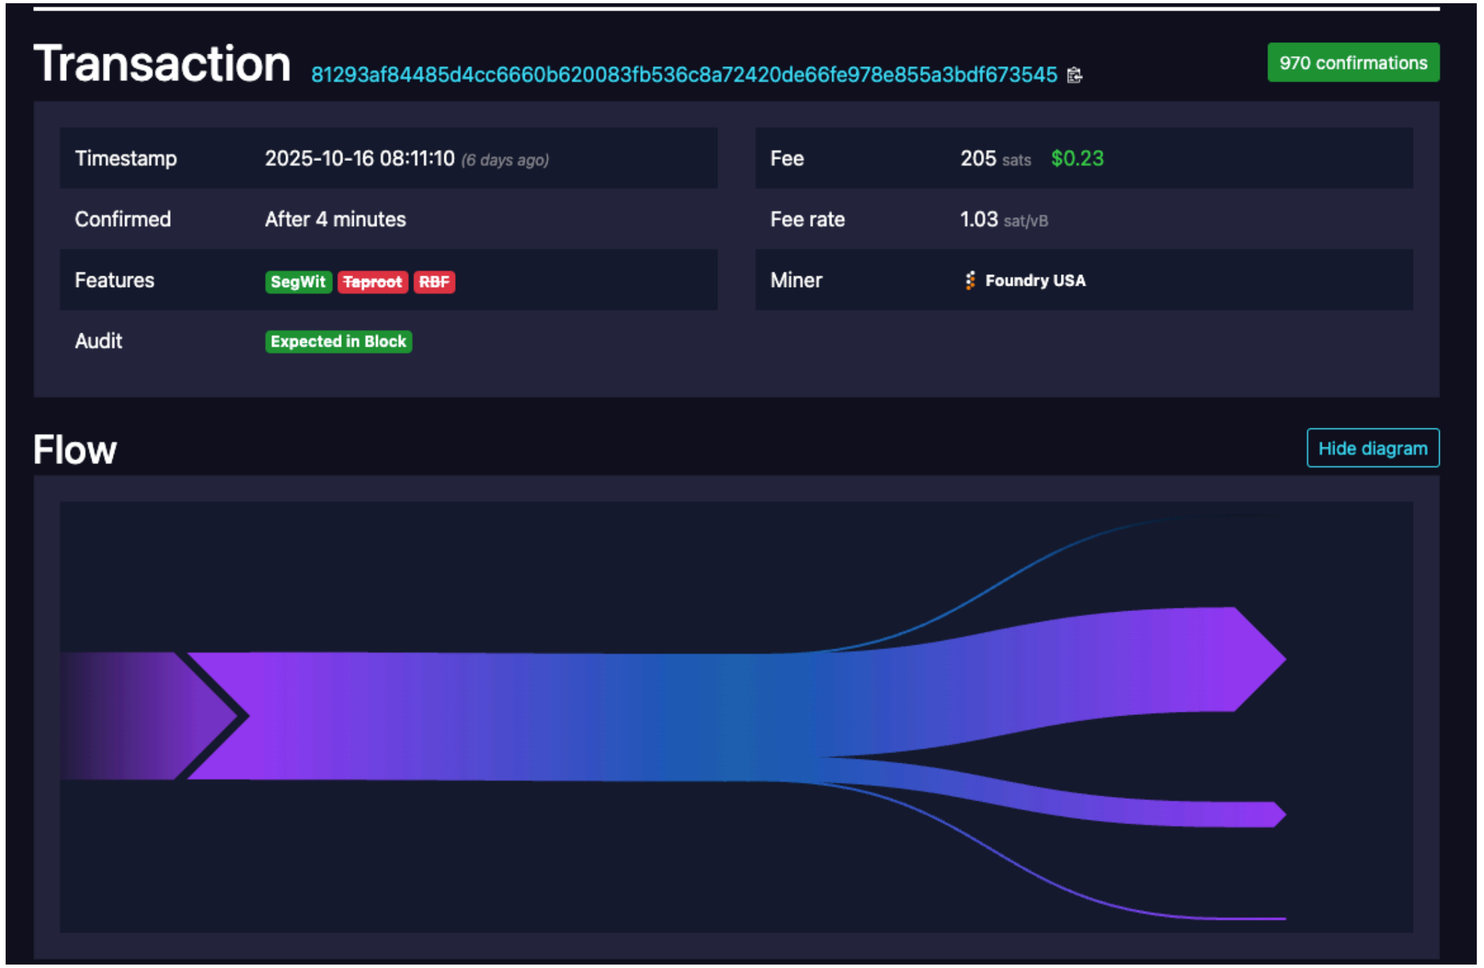

How it Works - Settlement Transaction

Input:

- Collateral pool

Output:

- Payout to borrower and lender
- Fee

“Mini Saylor” — Corporate Bitcoin Strategy

You're a Bitcoin maximalist who believes BTC will outperform long-term, but you want to add exposure without selling your stack or depleting cash.

Meet Alex: The Bitcoin Entrepreneur

“I run a tech company and hold 5 BTC personally. I’m convinced Bitcoin will hit $500K, but I don’t want to sell or use all my business capital to buy more.”

The Cadena Solution — Leverage Your Conviction, Keep Your Keys

- Decide how much additional exposure you want.
- Borrow additional Bitcoin based on risk tolerance and objectives.
- Use borrowed Bitcoin to increase your total position.
- Loan is settled in Bitcoin at term end (30, 90, 180 days, or 1 year).

The Process

1. Register on Cadena and download the signer app.
2. Borrow additional Bitcoin at market rates (execute online, sign in app).
3. Amplify your Bitcoin exposure without selling.
4. Settle the loan in Bitcoin at maturity.

The Outcome

- ✅ Increase your exposure from 0.05 BTC up to 5× stack leverage.
- ✅ No taxable event — you never sold your original stack.
- ✅ True self-custody throughout.
- ✅ No KYC or banks — pure peer-to-peer Bitcoin finance.

“Just like MicroStrategy’s strategy, but truly decentralized.”

“Dividend Debbie” — Stable Bitcoin Yield

You want steady returns above traditional savings, without bank counterparty risk—while staying aligned with Bitcoin’s long-term upside.

Meet Debbie: The Yield Seeker

“I have 10 BTC sitting idle. Banks offer 0.5% while taking huge risks with my money. I want steady Bitcoin-denominated returns with real security.”

The Cadena Solution — Earn Yield, Keep Control

- Lend your Bitcoin on Cadena’s marketplace to earn fixed returns.
- Your Bitcoin is secured by math and Bitcoin collateral on-chain.
- No counterparty risk — borrower collateral protects your principal.
- You understand the risk of BTC moving below the loan-to-value over the term.

The Process

1. Register and download Cadena’s signer app.
2. Choose lending terms (30, 90, 180 days, or 1 year).
3. Set your desired yield rate; use a market or limit order.
4. Match with borrowers.
5. Earn Bitcoin-denominated returns.

The Outcome

- ✅ Predictable yield — fiat-style yield, denominated in Bitcoin.
- ✅ Your keys, your coins — maintain custody.
- ✅ No bank risk — peer-to-peer with mathematical security.

“Like being a preferred shareholder in MicroStrategy, but with better security.”

“Borrowing for the Boat” — Liquidity Without Selling

You need $50,000 for a purchase but don’t want to sell BTC, miss potential upside, or trigger a taxable event.

Meet Captain Mike: The Bitcoin HODLer

“I need $50K for my dream boat, but selling Bitcoin feels like selling Amazon in 1999. There has to be a better way.”

The Cadena Solution — Access Liquidity, Keep Your Bitcoin

- Use your Bitcoin as collateral for a Bitcoin loan.
- Borrow Bitcoin to maintain your desired exposure.
- Convert borrowed Bitcoin to USD for your purchase.
- Repay the loan by buying back Bitcoin at maturity.

The Process (example)

1. Borrow 0.5 BTC for 1 year (assuming BTCUSD = $100,000).
2. Convert borrowed BTC to USD on your exchange of choice.
3. Buy your boat with the proceeds.
4. At term end, buy back $50,000 worth of Bitcoin and repay the loan.

The Outcome

- ✅ Get your boat without selling your stack.
- ✅ Maintain upside — you still own your original BTC.
- ✅ True self-custody — your keys, your control.
- • Conservative risk management: 50% LTV gives a wide buffer.
- • No margin calls: collateral only matters at final settlement.

“Enjoy life today while staying positioned for Bitcoin’s future.”

“Yield Arber” — Advanced Bitcoin Strategies

You’re sophisticated with capital and want to maximize returns by arbitraging between BTC lending rates and other opportunities—without sacrificing exposure.

Meet Sarah: The Yield Arbitrageur

“I see Cadena lenders earning ~10% while I can borrow fiat at ~5%, or have savings sitting idle. I want to increase the dollar value of my BTC position by earning yield on my stack.”

The Cadena Solution — The Spread Play

- Lend Bitcoin on Cadena while borrowing fiat elsewhere at lower rates.
- ✅ Maximize capital efficiency.
- ✅ Maintain Bitcoin exposure.
- ✅ Keep full custody — minimize counterparty risk.

Risk Considerations

- Leverage involves risk.
- Understand settlement mechanics.
- Plan for multiple BTC price scenarios.

“For those who understand Bitcoin deeply and want to maximize every satoshi.”
